HOME PAGE

Shows you where the app thinks your shopping and bases ingredients and prices based off of it

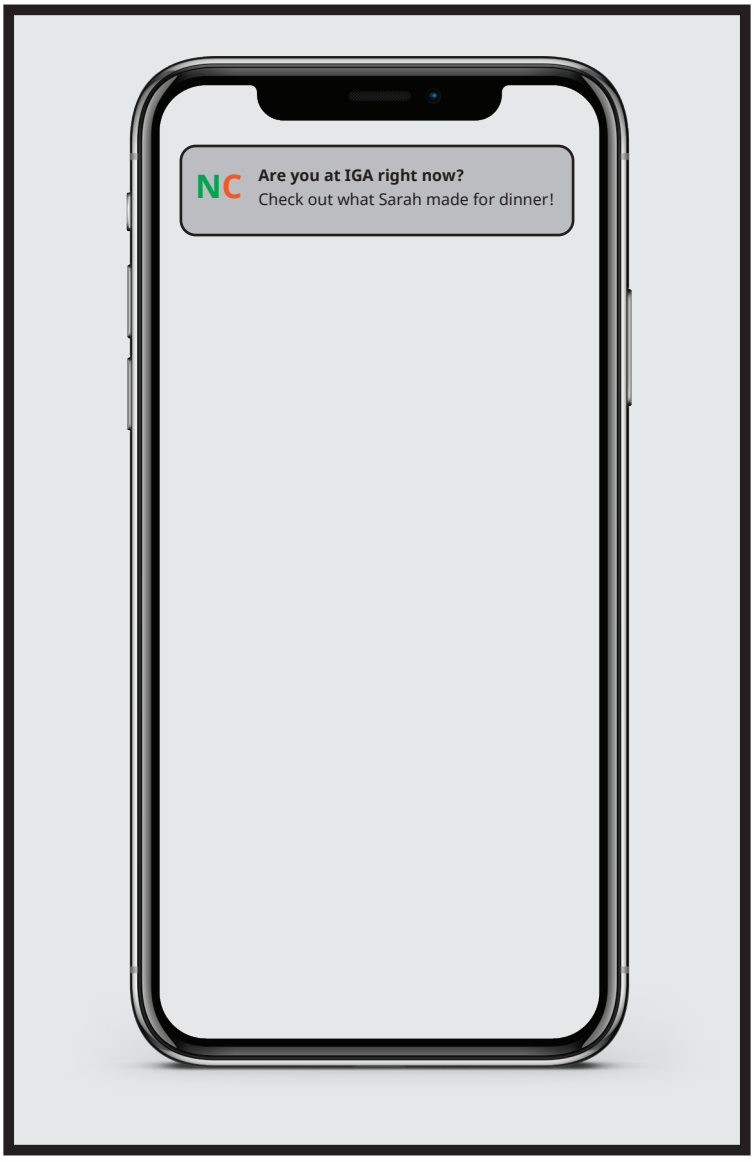

Quick entry point in to the social friend-based food suggestions on meals they've had or recommend

Shared group goal that is shared between friends to encourage a social aspect between the users

Shows that the app has recognised the user is currently grocery shopping and gives quick access to friend recommendations, shared goals, and the shopping mode.

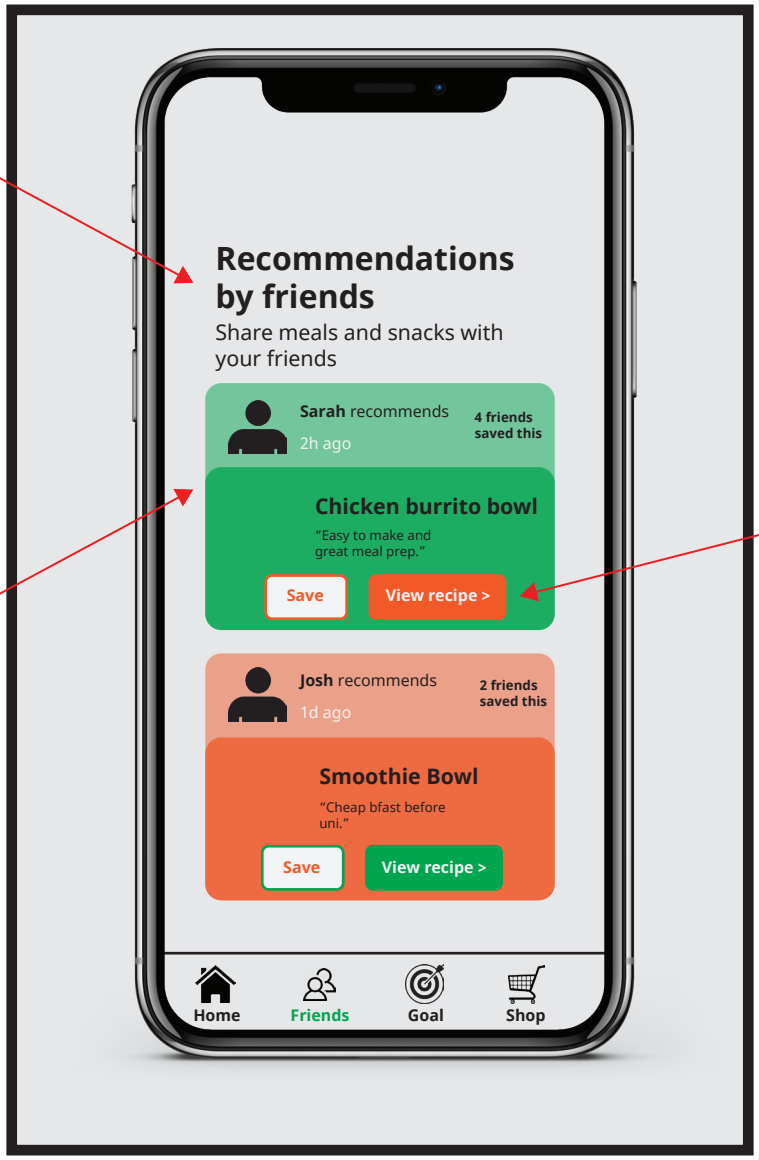

NOTIFICATION

When the user arrives at the grocery store, the app sends a location-triggered notification letting them know their shopping support is available. It acts as the entry point into the app without requiring the user to remember to open it first.

FRIENDS PAGE

Social feed shows the food suggestions made by your friends

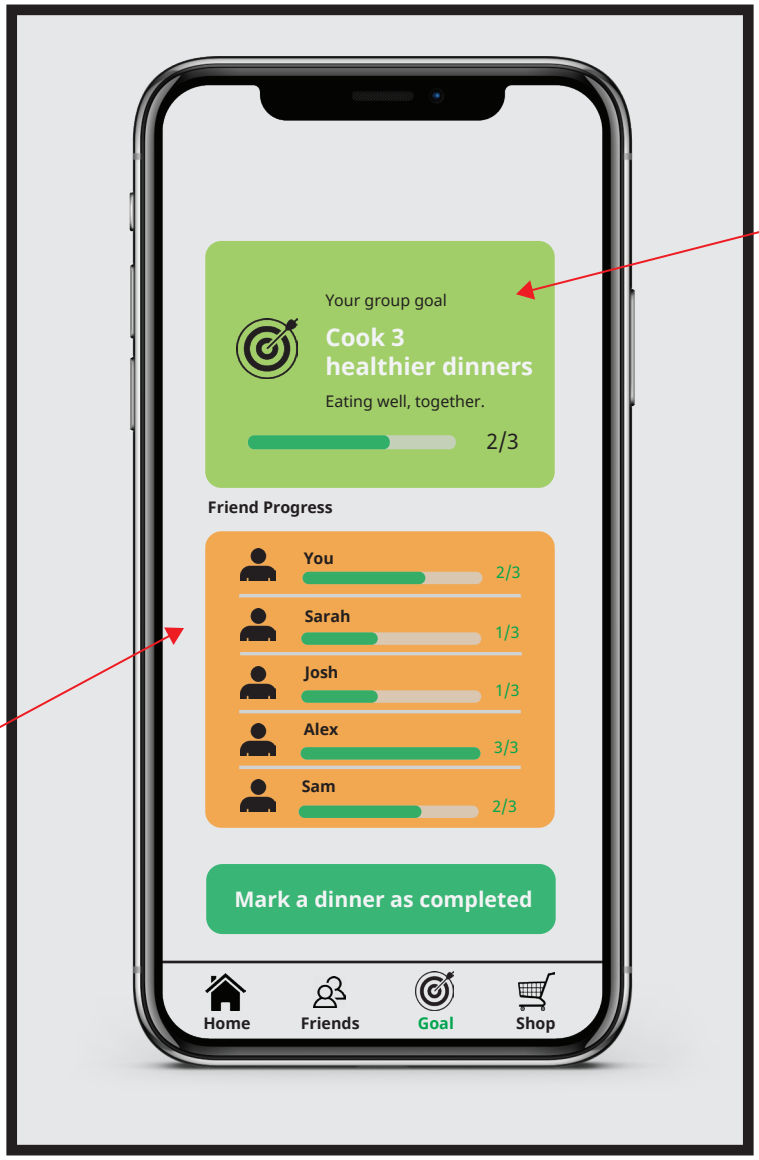

Check out the person's full meal recipes or save it for your next grocery shop

Useful context on to why your friend might have made the suggestion, when they made it and if any others have saved it

Shows meals and food ideas recommended by friends, including why they liked them. Users can save suggestions or open the recipe for more information.

GOALS PAGE

Show your groups current goal and the progress you've made towards it

Display's your progress against your group members' progress.

Shows a shared weekly food goal and each person's progress. It is mainly there to test whether seeing friends' progress feels motivating, useful, or unnecessary.

SHOP PAGE

Shows saved meal you have based on the things sold at the current supermarket you're at.

In-store view to help your with your shopping

Some social nudges to get you to try out some meals from your friends

Brings saved recommendations into the actual shopping trip by showing ingredients to pick up, goal reminders, and small suggestions from friends while the user is in-store.
