COMBINED GAPS ACROSS ALL 10 PAPERS — your design space :

1. **Social features are missing from in-store tools** — ShoppingCoach, food literacy apps all work for individuals only
2. **Social comparison nudges only tested online** — Di Cosola proved they work but only in online grocery contexts, never in physical stores
3. **Social media inspires but doesn't translate to purchases** — TikTok content changes attitudes but no research bridges it to the actual grocery aisle
4. **Uni students specifically under-studied** — most research uses teens or general adults
5. **Budget is always mentioned but never integrated** — every paper flags cost as a barrier but none build it into a social/contextual tool
6. **No system combines social + contextual + in-store** — this intersection is completely empty in the literature

Updated domain statement:

"We are interested in enhancing **healthy food choices for university students who live and shop near the UQ St Lucia campus** taking place when **grocery shopping in person at nearby stores** with the possibilities of social and/or contextual computing."

Interview criteria — who to recruit:

- Must be a UQ student (or student at a nearby uni)
- Must live near St Lucia, Toowong, Indooroopilly, Taringa, or in student accommodation (UniLodge, Iglu, etc.)
- Must do their own grocery shopping in person

5 refined interview questions (location-specific):

OPENING (30 seconds)

"Hi, thanks for taking the time to chat with me. I'm a student in DECO3500 at UQ and we're doing a design project exploring how university students make food choices when grocery shopping. I'd love to hear about your experiences — there are no right or wrong answers, I'm just interested in your stories. Everything you share is anonymous and only used for our university coursework. Is that okay with you?"

Wait for them to say yes before continuing.

"Great. This will only take about 10–15 minutes. Feel free to skip anything you're not comfortable with."

Q1: "Walk me through your last grocery trip - which store near campus did you go to, how did you get there, how did you decide what to buy, and what actually ended up in your basket?"

Q2: "Tell me about a time when a friend, housemate, or someone you live with changed what you bought or cooked. What happened and how did their input affect your choices at the shops?"

Altered the wording of the questions a bit to sound more natural and less suggestive for q3 4 and 5:

Q3: “Think about some food content you've seen recently on social media, like a recipe, trend, or someone's meal. Has anything you've seen ever influenced what you bought on your next grocery trip? Walk me through what happened.”

Q4: “Describe a time when you were shopping and had to choose between a healthier option and something cheaper or more convenient. What were you thinking about, and what did you end up choosing?”

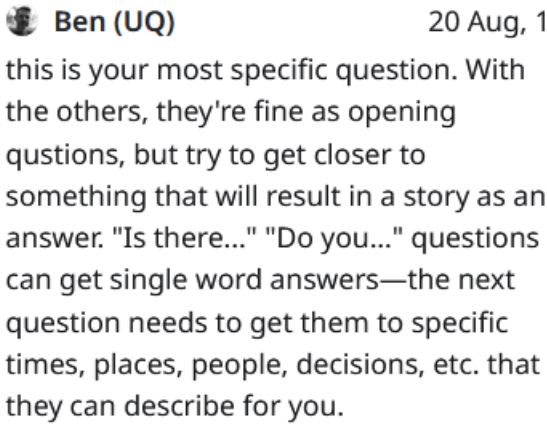

Q5: “What's the hardest part about eating well as a student living near UQ? Can you give me a recent example?”

CLOSING (30 seconds)

"That's really helpful, thank you so much. Is there anythin
grocery shopping experience that you think I should know

Let them add anything. Then:

"Thanks again for your time. This is really valuable for our

----------After 1st round of interview questions----------

Questions ideas – open ended, more story answers, 3-4 questions (our protocol) and have follow up questions for more answers. People don’t know themselves so try and get values/concepts from their responeses

Before we start, I just want to quickly cover a few things. This is part of a university project for DECO3500, and we're interviewing students about grocery shopping habits and testing an early app prototype. Your participation is completely voluntary — you can skip any question or stop at any time, no explanation needed. I'll be screen recording this session, including audio, so our team can review it later, but it'll only be used within our group for this assignment and won't be shared publicly or with anyone outside the project. Everything you say will be kept anonymous in anything we write up — we won't use your name. Are you okay with me starting the recording now?

Do you shop with other people usually? If so who? If not why?

- **Follow-up: Tell me about the last time you shopped with someone else — where were you, and can you remember a specific item you picked up (or put back) because they were there?**

How does budget, time, and convenience influence what you buy?

- **Follow up: Tell me about the last time you were in a rush or tight on money at the shops — what did you end up grabbing instead of what you'd planned, and why?**

How do you decide on what products to choose when grocery shopping?

- **Follow up: Think of the last time you stood comparing two similar products before deciding — what were they, and what tipped you toward the one you picked?**

Tell me about the last time you specifically thought 'this is the healthy option' while grocery shopping — what was the item, what made you call it healthy, and what did you compare it against?

Has anyone — a friend, family member, or something you saw online — ever told you something was 'healthy' that surprised you, or that you disagreed with? Walk me through what happened.

How does your living situation affect your grocery shopping experience?

- Follow up: Walk me through your recent grocery shop in detail — who did you buy for, and was there a moment where your housemates/family shaped what went in the trolley

If you shop for others (family, roommates), what special considerations are there?

- Follow up: Tell me about a specific time you had to buy something you wouldn't normally choose because of someone else's needs — what was it and what happened?

How does budget, time, and convenience influence what you buy?

- Follow up: Tell me about the last time you were in a rush or tight on money at the shops — what did you end up grabbing instead of what you'd planned, and why?

Is there a product you pay more/'priced up' for? Why?

- Follow up: What was going through your head? Did you consider the cheaper option?

Do you buy in bulk or small amounts? Why? Is there a specific store you specifically bulk/buy in small amounts?

How do you decide on what products to choose when grocery shopping?

- Follow up: Think of the last time you stood comparing two similar products before deciding — what were they, and what tipped you toward the one you picked?

Is there anything you avoid buying, or buy less of?

- Tell me about the last time you put something back on the shelf, or decided not to buy it — what was it and what changed your mind?

Brand/products you gravitate to, and why?" → "How do you decide between fresh/canned/frozen?

- Walk me through your last time choosing between fresh, canned, or frozen for one specific item — what was the item, and what made you pick the one you did?

What's something you changed about how you shop in the last year? What caused the change?

----------Inquiring about what healthy is for them----------

Tell me about the last time you specifically thought 'this is the healthy option' while grocery shopping — what was the item, what made you call it healthy, and what did you compare it against?

Has anyone — a friend, family member, or something you saw online — ever told you something was 'healthy' that surprised you, or that you disagreed with? Walk me through what happened.

Questions for the prototype

Give minimal context just enough that they're not totally lost, but not so much you bias about their reaction. E.g., "This is a prototype for a grocery shopping app —

take a minute to look around and tell me what you're thinking as you go, like you're talking out loud."

"What do you think this app is for, before I explain anything?"

Free exploration with think-aloud

Now ask your remaining prepared questions

- **First reaction / comprehension check**
    - Walk me through what you're seeing on this home screen — what do you think this app is for, before I explain anything?
- **Friend recommendations feature**
    - Would you actually want to see a friend's saved meal (like Sarah's burrito bowl) while you're standing in the store? Why or why not?
    - Whose recommendation would you trust enough to act on — anyone, or only specific people?
- **Group goal / progress feature**
    - How do you feel seeing your progress next to your friends' progress on the group goal (2/3, 3/3, 1/3)?
    - Would this motivate you, or would it feel like pressure/comparison you'd rather not see?
- This suggestion popped up while you were 'in-store' — is that the right moment, or would you rather see this before you leave home / at a different point in the shop?

Would you use this app?

Do you shop with other people usually?

How do budget, time, and convenience influence what you buy?

How do you decide what products to choose?

Ever thought "this is the healthy option" while shopping?

Anyone ever surprised you by calling something "healthy"?

Show them the app mock up

Q1: Thoughts on the Friend sharing aspect?

Q2: Ask about their thoughts on the group goals aspect?

Q3: Would you use this app if it were real?

Interview protocol for the prototype interview

Explain what the project is about and explain what the cart unit is for (cart device/display that gives support/help while shopping)

Walk through what each screen does, (without leading):

- Housemate suggestions/alerts: shows recommendations or nudges from housemates (e.g. "we're low on x", "Sam wants pasta tonight") to coordinate shared household shopping.

- Shopping list with running budget tracker: the list of items to buy, updating a live running total against a budget as items are scanned/added.
- Comparison screen: lets the shopper compare products (price, nutrition, etc.) side by side to make a more understanding choice in the moment.

Think aloud where they get to play around with the physcial prototype. I gave them a scenario: Imagine you just got to the grocery store after setting up the shopping list and receiving requests from your roommates over group chat. So while you're "pushing hte cart around" see what your roommates need, monitor your spending, and use the cart unit to compare two items if you're having trouble picking.

- only redirect if they get completely stuck

Follow up questions after

- What was your overall first impression of the cart concept?
- What did you think each screen was for, just from looking at it?
- Was there anything that felt confusing or unclear as you were exploring?

Housemate Suggestions/Alerts screen

- What do you think of this screen? What's your reaction?
- Would this be useful to you in real life? Why or why not?
- Would you want to respond to or dismiss a suggestion? How would you expect to do that?
- POTENTIAL QUESTIONS MAYBE
    - How do you imagine an alert or suggestion would show up here?
    - Is there anything about how the way you shop that this doesn't account for?

Shopping List screen

- What do you think about this screen? Whats your reaction?
- What do you like/dislike
- What do you think about how each ingredient is shown with the person who recommended to buy an ingredient
- POTENTIAL QUESTIONS MAYBE
    - What would you want to happen if you went over budget?
    - How would you expect to add or remove items from the list?

Comparison Screen

- Would you actually stop and use this while shopping or just something nice to have?
- What else would you like to see in this screen?

Suggestions (NEW)

- **What if shop unit splits in half? Gotta show designs for what they look like (better in half)**
    - **Mainly for shared shopping list but can use each function/feature on each split**

Overall

- Which screen do you think you'd use most? The least? Why?
- If you could change one thing about this, what would it be?
- Is there anything missing that you expected to see?
- Any final thoughts or things you'd want to tell?
