User Personas

Jerry, the budget and time conscious shopper.

Background: Second year computer science student, lives in a share house with three other people. Works part-time job three evenings a week.

Goals: Wants to get in and out of the grocery store fast. Sticks to a weekly grocery budget/buys a few things just for a day. Avoids buying things that the house already has.

Concerns: Doesn’t want to log every item, feels like a chore, especially when he wants to get out fast. Doesn’t use food health apps, he roughly knows his sugar and protein content but doesn’t want to be told what's good or bad. Has bought items that are already in the pantry or not needed since no one told him or assumed it was already used up/gone.

Relationship with NutriCart: Mostly uses the cart unit, specifically the checklist, running budget and deal alerts. Relies on the already at home reminder a lot. Doesn’t use the nutrition comparison most of the time, unless similar price or a product is on sale.

Quotes: “Just tell me what’s cheap or needed, I'll figure out the rest.”

Jasmine, the health and privacy conscious shopper.

Background: Final year nutrition science student, lives with two housemates who doesn’t share the same interest in health. Mostly shops for herself methodically and carefully, looking at the back of products for nutrition facts.

Goals: Wants to know enough nutrition details (protein, sugar, what's in the product) before making a decision between products. Prefers to base her cooking and grocery shopping from a plan instead making spontaneous choices. Values recommendations from friends/family she knows are health conscious like her.

Concerns: Doesn’t like being compared to others in terms of health or in general. Dislikes group leaderboards/health scores. Tried to use food/health apps but made her feel judged rather than informed or motivated. Doesn’t want to log meals, just wants the info to pop up when she’s deciding.

Relationship with NutriCart: Engages with the Meal board and recipe to list conversion at home, since she prioritizes planning more than in the moment decisions. Instore, shes uses the prodcut comparison a lot and focuses mainly on the nutrition facts. House recommendations are welcome but others don't.

Quotes: "Don't decide for me, I'll decide if a food is good based on the nutrition of it"

Sam – the "never really thought about it" student

Background: First year student who just moved into student accommodation for the first time after living with their family. Cooks time to time but eats a lot of whatever is the easiest to make.

Goals: Doesn't have a strict or a clear health or budget goals. Mostly just wants grocery shopping to be easy and not stressful. Open to eating a bit better or spending less if they are more informed/takes less effort. Wants to fit in with housemates and doesn't want to be the only person to not contribute to the groceries.

Concerns: Finds meal planning or tracking nutrition intimidating, feels like this is something people who are into healthy already do and is not something beginners should use. Doesn't know what a reasonable grocery budget is and gets overwhelmed by the different choices in the grocery store. Usually grabs familiar brands out of habit.

Relationship with NutriCart: Wouldn't set this up themselves but with others. Starts off with the meal board, seeing a housemates suggested meal with the cost, time and servings already planned out is less intimidating compared to a recipe from a website. He would be using the simple checklist and the "already at home" alert a lot when grocery shopping. Since Sam doesn't have a strong opinion on specific brands/products, his roommate's recommendation would nudge him to buy those brands. The comparison screen will be useful to deter decision paralysis and will slowly keep him informed on what is healthy/better for him.

Quotes: "I don't know what I'm supposed to be looking for... I'll get whatever people recommend to me."

----------User Scenarios----------

1. After a long day of classes, a student quickly goes grocery shopping. They grab a few things without a thought and doesn't consider if they are healthy or not
    a. John, 21 year old Computer Science student at UQ, living in student accommodation. Because of uni, work and his assignments, he doesn't pay attention to his diet/what he eats and buys what is familiar to him or is cheap. Not opposed to eating healthy, but doesn't know whats considered healthy and due to time constraints isn't able to become more informed.
        i. Scenario – Its 8 pm on a Monday and John just finished working at his sales job at Chermside. He quickly heads to Coles and he grabs his usual dinner: bread, cup noodles and a couple of energy drinks. He is hurriedly buying food without a second to think since he has an assignment due on Thursday and he is halfway done with it. He scans the food quickly at the self-checkout and leaves the store, without considering any healthier alternatives to what he just bought. By the time he goes home he sloppily makes his cup noodles as he drinks an energy drink and doing his assignment.
        ii. Pain points – John isn't against eating healthier, he just has no time to consider and on autopilot most of the time grocery shopping. There is no moment in his routine where his mind thinks about it.
