Week 5 and 6 is to diverge – deepen understanding, generate a broad set of new directions (whehter it'd be through crazy 8 or through the miro board week 6 tuesday)

Week 6 and 7 is when we will converge, narrow to a direction, we can do affinity mapping/contextual inquries. Can make a user criteria/requirements for our project. Can run a session with people (physically) to test out our directions

Week 7, 8 and 9 will explore how we can "solve" our topic.

Week 10 – 13 will build and finalize the solution

Week 5

- Refine more research and interview questions. The interview questions should be more specific, as a 'story' question and potentially questions about what healthy is to them for our definition of it
    - Create a prototype of the Social Shopping Companion App to use in interviews
- Potentially do more interviews after reviewing and refining the new interview questions and prototype

Week 6

- Brainstorm using the combined data + research and don't think of making an app
- Rough draft/early prototype of the brainstormed ideas and use these as interviews questions to see if users would be willing to use it and get comments about the design

Week 7

- Consolidate research, data, prototypes into one diagram (or not not sure what to show for week 9)
- Analysis of what we have done and put it against if we matched user requirements or design criteria or if we successfully achieved one primary focus
- Document everything on github
- Refine chosen prototype

Week 8

- User flow and produce wireframes and prototypes
- Get our definitions down (like whats healthy in this case)

Week 9 – Stand-up presentation

- Produce a mid fiedlity wireframe/prototype and do usability interviews
- Receive feedback from the tutors and use it to guide us in the following weeks

Week 10

- High fidelity prototype mainly the core functions of our design
    - Can show to people to recieve feedback

Week 11

- Finishing up and refining the features in our design. Foucs on the core concept and remove non-essential features if can’t make it on time
- Run another evaluation/interviews but this time in an actual shopping trip and compare what we expected vs what we got
- Finalise feedback whether from interviews or from tutors

Week 12 - Tradeshow

- Live demo, A2 poster, 2-3 minute pitch
-
